

API's

API's

Application Programming Interface

API's are simply used to change the data inside the webpage.

Just for the example, API → Waiter

Here API acts like a waiter which takes the request and serves the response of the customer which is user, and the kitchen is the server.

———— x ————

API's
↓ returns
Data
(JSON)

Now a days, API's return all the data in the JSON file format.

Some Random API's are-

1. <https://catfact.ninja/fact>

This API sends some random data about cat facts.

2. <https://www.boredapi.com/api/activity>

It sends an activity to do when bored.

3. <https://dog.ceo/api/breeds/image/random>

It sends cute dog pictures.
